I. Introduction	5
II. Stations of the marine investigation vessel "Margrethe"	6
III. Stations taken by various vessels belonging to the Danish Navy and the Danish mercantile Marine	12

I. Introduction.

THE 636 stations here noted are situated for the most part in the North Atlantic. There are, however, a few in the South Atlantic, and a fairly considerable number in the Mediterranean, and finally, one or two isolated stations in the Red Sea and the Indian Ocean.

From the manner in which the work was carried out, the stations fall into two markedly distinct groups: 1) those of the marine investigation vessel "Margrethe", comprising Nos. 1001—1073 in the following list, and 2) stations from various vessels not equipped for marine investigation purposes (Nos. 250—822 in the list).

In both cases, the work was carried out with implements belonging to the Danish Committee for the Study of the Sea, and according to instructions from the present writer. The object of all investigations was to procure a survey of the biological conditions, particularly the fish fauna, in the open ocean, partly for completion of the survey obtained by previous work of the Committee with the marine investigation vessel "Thor", in the eastern marginal area of the Atlantic (including the Mediterranean), partly as a preliminary stage towards a contemplated investigation cruise over the Atlantic with a vessel specially equipped for the purpose. And in contrast to the "Thor" Stations, those here noted are almost exclusively situated over oceanic depths.

With regard to the fishing implements used at the stations, reference may be made to the list below.

Abbreviations.

S. 100.	Stramin-net, open, conical, 100 cm in diam. at opening ¹ .
S. 150.	— — — 150 —
S. 200.	— — — 200 —
P. 100.	Silk-net, open, conical, 100 cm in diam. at opening ² .
P. 150.	— — — 150 —
P. S. 100.	Net, open, conical, made of stramin and silk, 100 cm in diam. at opening.
P. S. 150.	— — — — — 150 —
R. 200.	Net, open, conical, made of shrimp-net, 200 cm in diam. at opening.
R. 50.	— — — — — 50 —
D. 1.	Dredge, rectangular opening, 27×117 cm.
D. 2.	— , triangular opening, 45×45 cm.
H.	Hand-dredge, 18×14 cm.
Aa 1.	Eel hand-seine.

¹ Stramin = a coarse canvas made of hemp, which has ca. 20 threads to 3 cm.

² Silk = a silk gauze with ca. 35 threads to 3 cm.

II. Stations of the marine investigation vessel "Margrethe".

These stations, numbering 73 in all, were taken in course of the time from 14. July 1913 to 20. Dec. of the same year, on a cruise in the Atlantic with the motor schooner "Margrethe". This was a small two masted schooner of 90 tons, with auxiliary screw and 25 HP motor, kindly lent to the Committee by the owners, the firm Vendsyssel Packing Co., for the cruise. As far as was possible with the restricted space available, the vessel was equipped for marine investigations, and furnished with the requisite apparatus; in particular, the schooner was well provided with implements for pelagic fishery.

The crew was to a certain extent the same as that engaged on the previous cruises of the marine investigation vessel "Thor", and the collections were made under the supervision of mag. sc. P. JESPERSEN.

As will be seen from the chart Pl. I, the stations are situated between the Færöes and the West Indies, thus embracing a considerable portion of the North Atlantic. The work consisted especially of hauls made with larger and smaller pelagic nets, worked at different depths, from the surface to such considerable depths as could be reached with 4000 metres of wire. As will be seen from the station lists, several nets were as a rule towed at the same time from each station.

Hydrographical investigations were also carried out; these have been dealt with in a report by J. P. JACOBSEN, in "Meddelelser fra Kommissionen for Havundersøgelser", Serie Hydrografi, Bind II, No. 5, 1916.

After a very successful cruise across the Atlantic from the Færöes, *via* the Azores, the Newfoundland Bank, and the Bermudas to the West Indies, the vessel went ashore and was wrecked on the island of Anegada, West Indies, at the end of December 1913. Fortunately, the greater part of the extensive biological collection was saved, but the great work which had been planned for execution during the return voyage of the schooner over the Atlantic to Europe had to be relinquished.

List showing Stations taken by the marine investigation vessel "Margrethe".

III. Stations taken by various vessels belonging to the Danish Navy and the Danish Mercantile Marine.

From early times, Danish seamen have been noted for the way in which they have contributed to biological research by observations and collections made during their voyages about the oceans of the world. Their activity in this sphere was particularly marked and successful some half a century ago, when the masters of various sailing vessels in the mercantile marine, especially Captains A. F. ANDREA and HYGOM, acting on the initiative of Professor JAPETUS STEENSTRUP made extensive collections of marine animals in the open oceans. These collections, which are preserved in the Zoological Museum at Copenhagen, are unique in their way, and have proved of great scientific importance to the study of the fauna of the open sea, as shown for instance in the publication of the standard work "Spolia Atlantica". This work, to which many of the most prominent Danish Zoologists have contributed, was issued by the Kgl. Danske Videnskabernes Selskab toward the close of the past century.

It was especially on the cruises of sailing vessels that opportunities were found, when becalmed or delayed by contrary winds to make collections of marine animals, and it was thus natural that the achievements in this sphere of work should become slighter as the number of sailing vessels decreased. Other circumstances also, primarily the death of the first zealous pioneers, have likewise contributed to the change.

As will be seen from the chart Pl. II and the lists, a renewed application, from the Committee for Study of the Sea, to Danish mariners, masters and shipowners, for further assistance in the research in the open sea, has borne rich fruit. We find, for instance, no less than 563 new stations during the years 1911—1915, made by the officers on board many different vessels belonging to the Navy or the Mercantile Marine.

The vessels were provided with implements by the Committee for Study of the Sea, and furnished with a guide explaining the manner of carrying out such investigations. Open conical nets were used for the work, with an opening diameter varying from 1 to 2 metres. These were towed at a rate of abt. 2 knots an hour, in the upper water layers, with from abt. 10 to abt. 300 metres of wire out, the resulting catch of fish and other animal forms being preserved in formol. At each station, also, the temperature of the surface water was noted and a water sample taken and preserved for subsequent determination of the salinity. All these data will be found recorded in the lists.

A glance at these, and at the chart Pl. II, will serve better than words to give an idea as to the extent of the work which has here been carried out, and will show how highly the individual officers concerned — whose names appear from the lists — have deserved the thanks of all interested in marine research. Naturally, not all the collections brought home were of equal value, nor treated with equal care, but there is no doubt that in the great majority of cases, the work was carried out most carefully, and many of the stations are, in respect of the yield, by no means inferior to those made by professional marine investigation vessels.

By way of further explanation of the chart Pl. II, it may be stated that distinction has been made between stations carried out by steamers (•), sailing vessels (○) and ships of the Royal Danish Navy (▲). As the stations in certain areas lie so close together that it is difficult to get a clear view of them on the main chart, such areas have been additionally shown on an enlarged scale elsewhere on the plate. This applies to the waters round Madeira, round the West Indian islands of St. Thomas and St. Croix — until recently Danish possessions — and one or two other areas in the central part of the Atlantic.

Of the stations shown, 74 were made by the Danish Navy, in all cases by the schooner "Ingolf" on voyages to and from the West Indies. Of the remainder, 306 were made by steamers, and 183 by sailing vessels. Many of the stations from sailing vessels, however, lie quite close together, and should therefore be regarded as repetitions.

A list will be found below showing the names of the vessels, and the number of stations made by each.

By far the most important part of the work has been carried out by vessels belonging to the East-Asiatic Company of Copenhagen, with 178 stations, the United Steam Ship Co. of Copenhagen with 108, and the schooner "Ingolf" of the Royal Danish Navy, with 74 stations. A very considerable contribution was also made by the schooner "Agent Petersen" of Marstal, with no less than 50 stations.

For the rest, reference may be made to the detailed information given in the lists and on the chart. And in conclusion, I feel it a pleasure as well as a duty to express once more, on behalf of the Committee, our sincere thanks to the Ministry of Marine and to the shipowners and officers in question for the very valuable assistance which they have afforded to our researches.

List showing the names of the vessels and the number of stations made by each.
